CONSTRUCTION & DEMOLITION WASTE

📍 CHANGSHU

Daily Capacity

2,000 t/d

Total Processing Scale

1,450,000 m³

This waste treatment plant is set for the recycling, transportation and landfill of mixed C&D waste in Changshu. The main purpose of this project is to make good use of C&D waste and make the material in it meet the requirements of incineration and landfill.

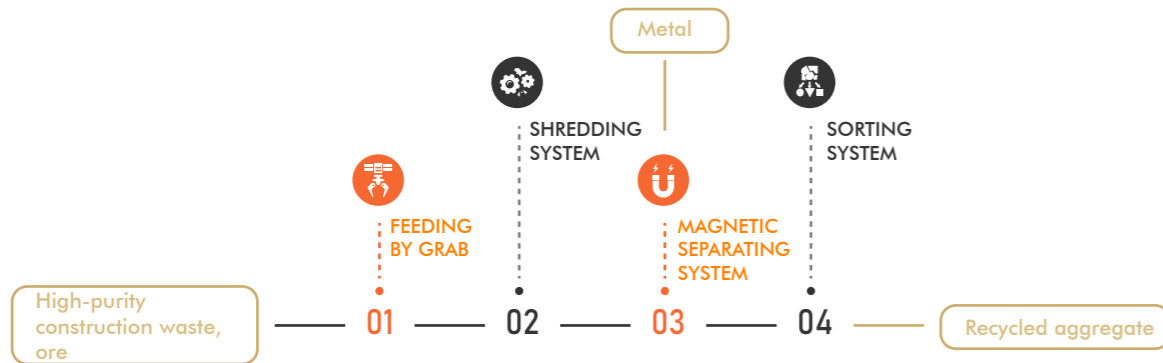

In this project, the mixed C&D waste is divided into four categories: ash, building aggregates, combustibles, and recyclables (plastic, firewood, and metal). Construction waste will be processed into recycled aggregates; bulky waste, mattresses, furniture waste, garden waste and so on will be crushed and sorted to reduce the waste in volume and capacity and to reuse the recyclables.

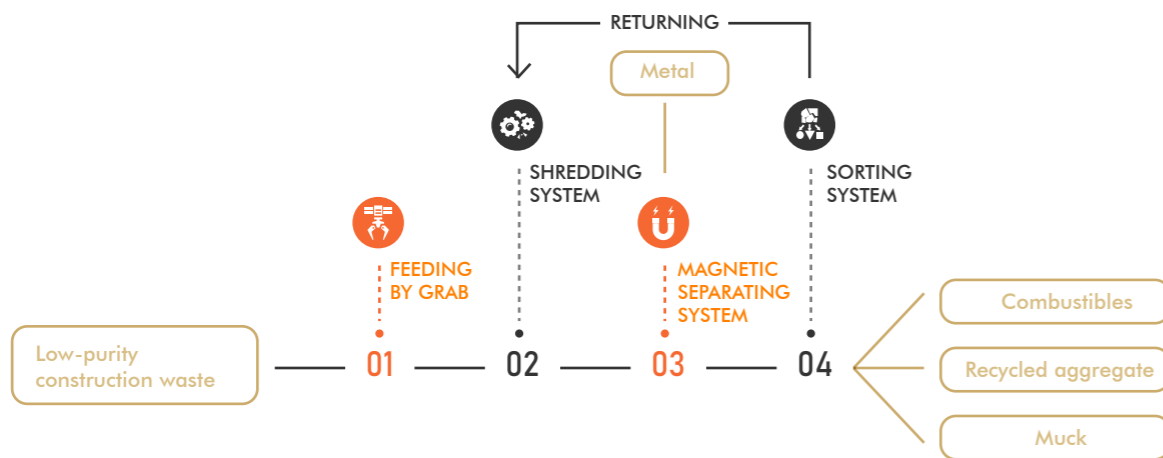

HIGH-PURITY CONSTRUCTION WASTE, ORE

Waste generated during mine rectifying or construction and demolition, in which there is a high proportion of concrete and bricks, 0~5% of muck and 0~3% of combustibles.

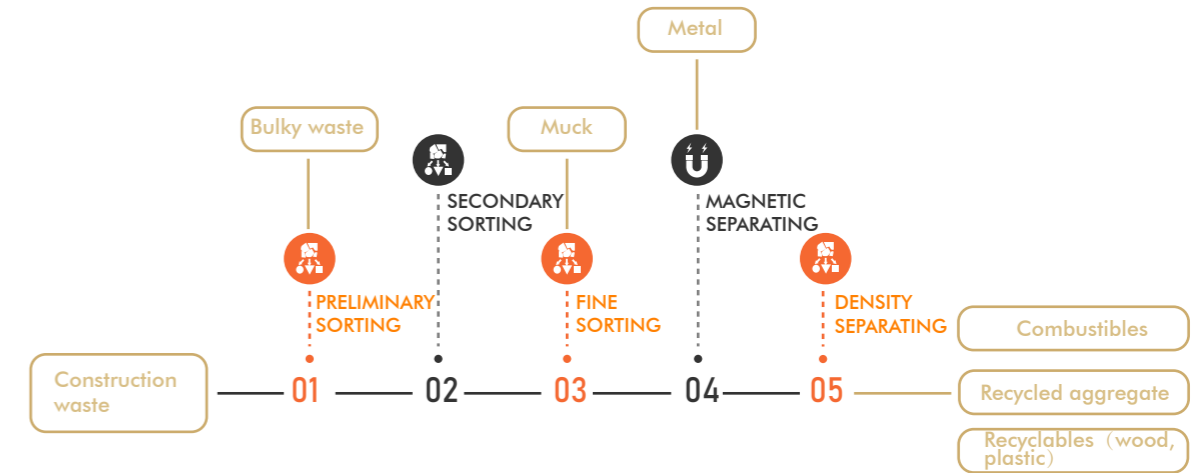

LOW-PURITY CONSTRUCTION WASTE

Construction or demolition waste, in which the slag content is more than 5%, the combustible content is 3-8% with no large strip of combustibles.

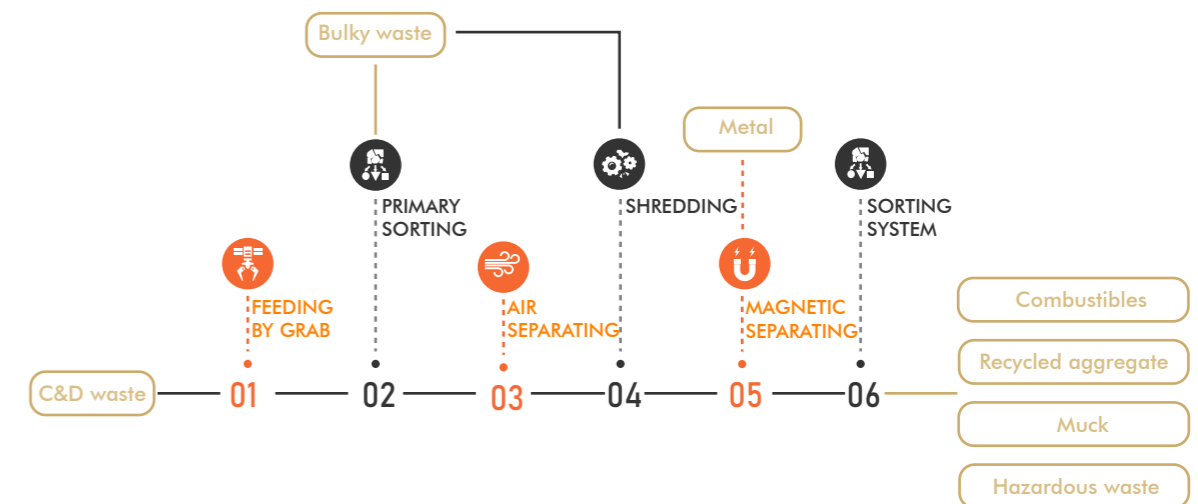

CONSTRUCTION WASTE

Decoration waste or waste generated in exhibitions, where the content of slag exceeds 5% and the content of combustibles exceeds 8%.

MIXED CONSTRUCTION WASTE AND DECORATION WASTE (C&D WASTE)

Landfills and stock dump for construction and decoration waste in which there is more than 5% of slag and more than 8% of combustibles.

The details are subject to the actual situation of the material .It is for reference only.
