

**JONO<sup>®</sup>**

6 KEY TECHNOLOGIES

# **BIOLOGICAL TREATMENT**

  
**MBT**

## Biodrying&Compost

JONO exclusively introduced MVT technology into China.

MVT biological treatment technology is to transport fresh air to the biological bin for uniform oxygen supply and keep the temperature in a range which is suitable for microorganisms. Through continuous monitoring and controlling of temperature and humidity, the degradation process of organic matter (aerobic biological stabilization) in various garbage can be accelerated, so as to achieve the purpose of reducing the moisture content of materials.

## MBT BIOLOGICAL PROCESSING

Mion Ventoltermica has long-term experience in the field of design, construction and installation of composting (biostabilisation) plants. These systems are highly innovative and technologically-advanced. They can produce high quality compost and, at the same time, treat unpleasant smells effectively and efficiently.

GREEN TECHNOLOGY FOR EVERY FAMILY
