Bulky waste
Treatment Plant

200 t/d

Bulky waste refers to the waste with a weight of more than 5 kg or a volume of more than 0.2 cubic meters or a length of more than 1 meter, which is of strong integrity and needs to be dismantled and reused or disposed of. Bulky waste like old furniture, waste mattresses, waste sofas and garden trees is more difficult to collect and transport because of its large size.

Bulky waste accounts for 3% -5% of MSW. Aiming at a series of problems, eg. large area for storage of bulky waste and difficulties of transportation, the shredding system for bulky waste was born. That system mainly consist of heavy chain plate conveyor, double shaft shredder, iron separator, dust reduction system, intelligent control system, etc.

The details are subject to the actual situation of the material. It is for reference only.
